SUMMARY

- Aspiring ASP.NET Developer and Full-Stack Developer specializing in ASP.NET Core and React. Experienced in designing scalable web applications, RESTful APIs, and real-time systems using Clean Architecture and SQL Server. Passionate about building maintainable software and solving complex technical challenges to improve system performance.

SKILLS

- Backend:** C#, ASP.NET Core, RESTful APIs, Entity Framework, ADO.NET, LINQ, SOLID Principles, Design Patterns, SignalR (WebSockets).
- Frontend:** HTML, CSS, JavaScript, React, Tailwind, Bootstrap.
- Database:** SQL Server, T-SQL (queries, stored procedures, database design).
- Programming & Problem-Solving:** C++ (algorithms, data structures, competitive programming).
- Tools:** Docker, Caching, Git, GitHub, Debugging, Postman, Swagger, Visual Studio, VS Code, SSMS.

EXPERIENCE

Backend Developer | Leading Point Internship | Jan 2026 – May 2026

- Designed and implemented scalable ASP.NET Core RESTful APIs following Clean Architecture principles with strong focus on modularity, maintainability, security, and enterprise-level backend structure supporting long-term scalability and feature expansion.
- Optimized database performance using Entity Framework Core by analyzing and refining complex SQL queries, improving indexing strategies, and enhancing data access patterns which resulted in faster execution time and improved overall system performance under load.
- Collaborated closely with frontend developers to integrate APIs seamlessly into client applications ensuring data consistency, proper error handling, and smooth communication between system layers while actively contributing to debugging and testing.

Frontend Developer | Dot Jordan Internship | Oct 2024 – Feb 2025

- Built responsive and visually consistent web interfaces using React, JavaScript, and Tailwind CSS with a strong focus on performance, reusability, and clean component architecture.
- Enhanced user experience by implementing efficient UI logic, optimizing rendering performance, and integrating APIs to deliver smooth and interactive web applications.

PROJECTS

[Job Platform](#) – ASP.NET Core, React, SQL Server

- Developed a job platform that allows users to create profiles, search for jobs, apply to listings, and manage applications.
- Built scalable RESTful APIs using ASP.NET Core with Clean Architecture and Dependency Injection to ensure maintainability.
- Implemented secure authentication and authorization using JWT along with OTP-based email verification.
- Optimized search queries using EF core and indexing, improving retrieval time by 40% and integrated Gemini API for AI-driven CV analysis and personalized learning roadmaps.

[Real-Time Chat](#) – ASP.NET Core, React, SQL Server

- Developed a high-performance, live chat system utilizing SignalR (WebSockets) for instantaneous text and media message delivery.
- Implemented Clean Architecture and Repository Pattern, securing endpoints with JWT Authentication and optimizing high-concurrency connections for 500+ simultaneous users.
- Engineered DB tracking for messaging workflows, including dynamic delivery statuses (*Sent*, *Delivered*, *Read*) and user management.

[E-Commerce](#) – ASP.NET Core, React, SQL Server

- Designed a scalable full-stack e-commerce platform with authentication, product management, cart, and order processing.
- Implemented RESTful APIs using ASP.NET Core following Clean Architecture principles, ensuring high maintainability.
- Integrated JWT-based authentication and role-based authorization to secure endpoints and control user access.

EDUCATION

- Bachelor of Software Engineering – Al-Balqa Applied University, Jordan | Oct 2022 – May 2026 | GPA: 3.5.
